

ENVIRONMENTAL POLICY

Stack It Shelving Pty Ltd is committed to achieving industry best practice environmental management in all aspects of our business from the manufacture of our products, to their delivery and placement at our customers' premises, and in the methods we use for dismantle and relocations of used furniture and shelving systems. In keeping with this commitment business our objective is to ensure our business practices protect, and sustain the environment. We also strive to be a responsible and respected corporate member of the community within which we work.

We will comply with all relevant legislation pertaining to the protection of the environment.

Stack It Shelving's commitment to environmentally conscious practices includes:

- Implementing, improving and maintaining our environmental management systems, using a structured approach for the setting and reviewing of our environmental objectives and targets
- Ensuring that we listen and respond to the requests of our client's in implementing environmentally sustainable design, manufacturing, assembly, dismantle, relocation and delivery practices for all of our products and services
- Working actively alongside our clients and other stakeholders to enable environmental issues and/or concerns to be addressed and remedied as quickly as possible
- Conducting all of our activities in a manner consistent with the principles of environmental sustainability, including minimising waste generation and maximising recycling opportunities. At the core of this is our commitment to use as little packaging on our products as is practicably possible, and any packaging we do use, is to be re-used and recycled
- Preventing pollution and minimising other adverse impacts of our activities by using products and services that have minimal adverse environmental impact. All of our personnel are committed to minimising our environmental impact by removing any surplus materials or rubbish generated by us from site, and generating efficient delivery plans to reduce our carbon footprint
- Promoting environmental consciousness among all of our employees, contractors, and clients, through the communication of our environmental objectives
- Reviewing our environmental practices annually in order to continually evaluate the success or shortfall of our environmental policy and management systems to ensure we remain at the forefront with industry best practice and environmental performance
- Identifying any potential environmental impacts of our operations and developing mitigation strategies to reduce our environmental footprint
- Minimising land-fill waste by offering strategies to our clients to increase and enhance the lifecycle of our products through a product stewardship program, this is a fundamental core of our business, and one of our primary services is that of removing unwanted furniture and shelving systems for the sole purpose of recycling as many components of those systems as possible, and wherever we can, increasing the useable lifecycle of products we handle through refurbishment and re-sale.
